

E Safety—Did you know...

Online Gaming

Gaming has developed in leaps and bounds over the last few years. Now, many games consoles can access the internet, enabling users to keep up-to-date with the latest games, downloads, tips and tricks. Games can also be played online through a PC, laptop or mobile phone.

Online gaming carries many of the risks that any other online activity carries. The games often involve many other players, meaning your child could be interacting with strangers, not just children but also adults in an environment they feel completely comfortable and at ease in.

Many game sites will also allow the user to create a profile, using personal information.

Without the proper safety precautions, this could be open for all to see (much like a social networking profile).

Online games also often involve a chat function; this may be text chat or voice chat. The same risks that apply to general chat rooms therefore apply in gaming situations—particularly with regard to personal information and inappropriate conversations / language.
