

with Mr Price

Computers have been an integral part of my life growing up. I've always been fascinated by the range of programmes available and the opportunities that the computers and internet have provided. In my second year here at Perry Hall, I am eager to bring a range of technological experiences to the children through our broad Computing curriculum.

While my background is that of a historian and geographer, technology has played a vital role in allowing me to enjoy these fields. Having access to an endless wealth of sources to research civilisations past, to mapping and projecting climate graphs through ArcGIS, computing has been a part of my educational journey — a journey that still continues today in the classroom.

Many of my hobbies are done through the computer, be it gaming, reading or researching where I am going to go next! I have a keen interest in the latest technology and am often seen trawling the web for the newest unique gadget.

As the Computing lead here at Perry Hall, I aspire to bring a wealth of technological experiences into our broad curriculum and allow our children to explore the possibilities that computing can bring.
